SETUP & INIT

Configuring user information, initializing and cloning repositories.

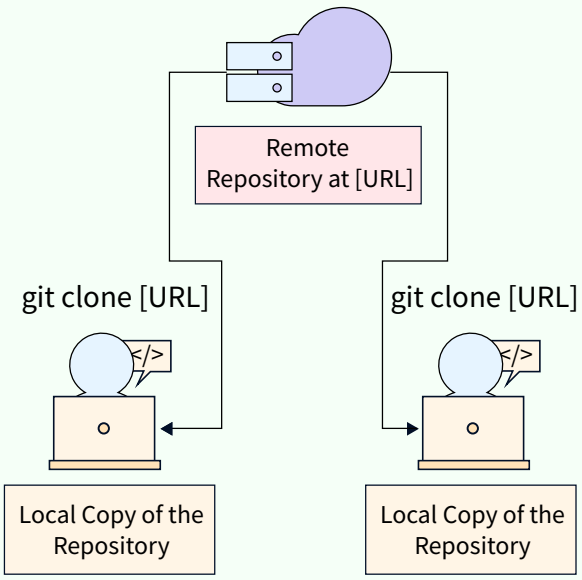

$ git init

Initialize an existing directory as a Git repository.

$ git clone [url]

Retrieve an entire repository from a hosted location via URL.

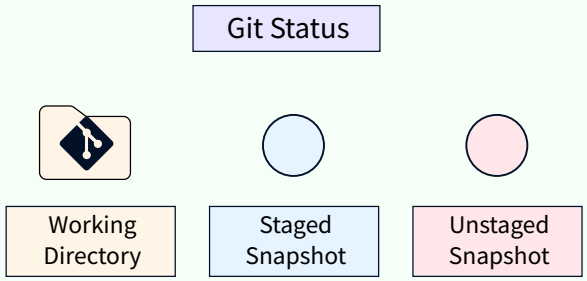

STAGE & SNAPSHOT

Working with snapshots and the Git staging area.

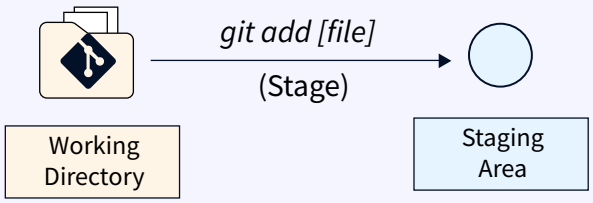

$ git status

Show modified files in working directory, staged for your next commit.

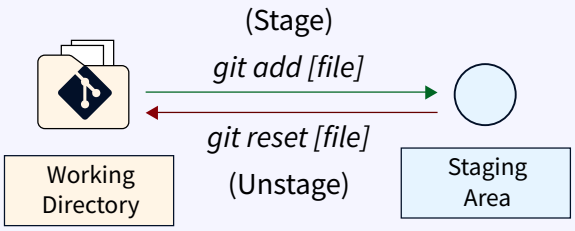

$ git add [file]

Add a file as it looks now to your next commit (stage).

$ git reset [file]

Unstage a file while retaining the changes in working directory.

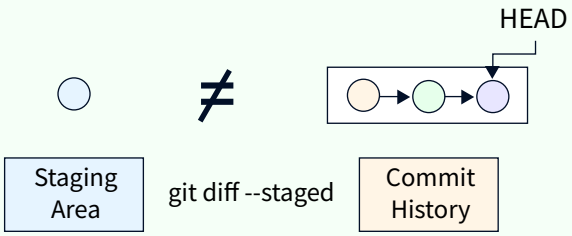

$ git diff

Diff of what is changed but not staged

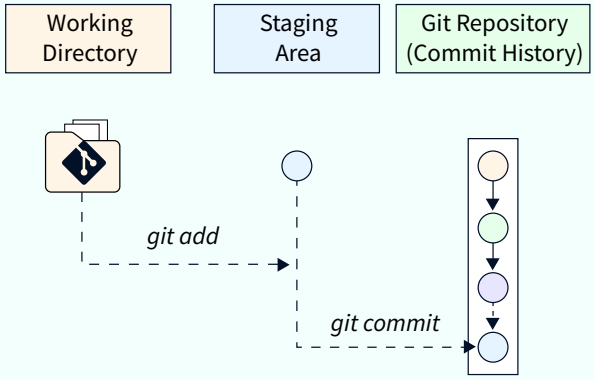

git diff --staged

Diff of what is staged but not yet commited.

$ git commit -m "[descriptive message]"

Commit your staged content as a new commit snapshot.

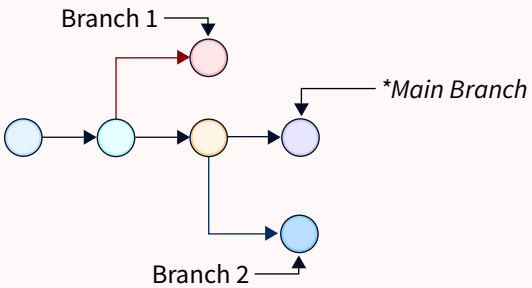

BRANCH & MERGE

Isolating work in branches, changing context, and integrating changes.

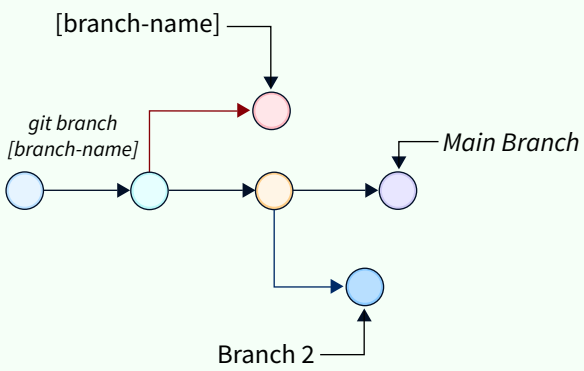

$ git branch

List your branches. A * will appear next to the currently active branch.

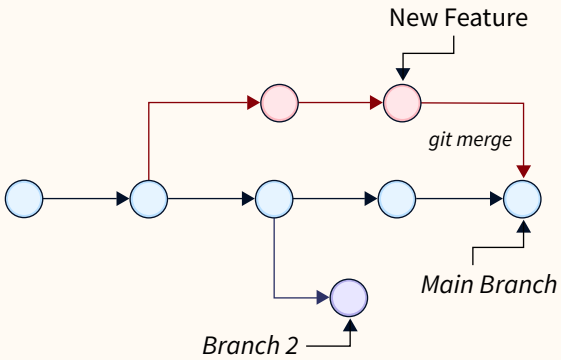

$ git branch [branch-name]

Create a new branch at the current commit.

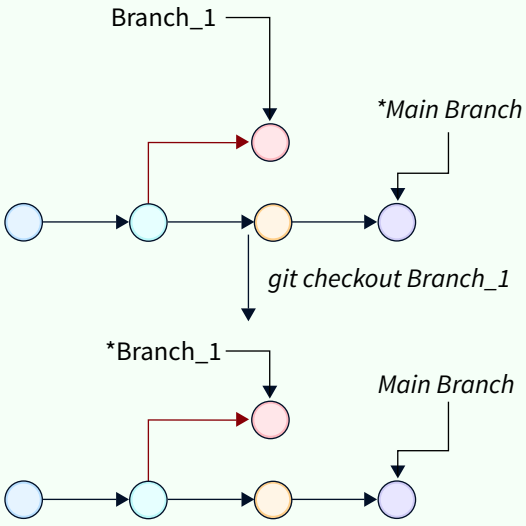

$ git merge [branch]

Merge the specified branch's history into the current one.

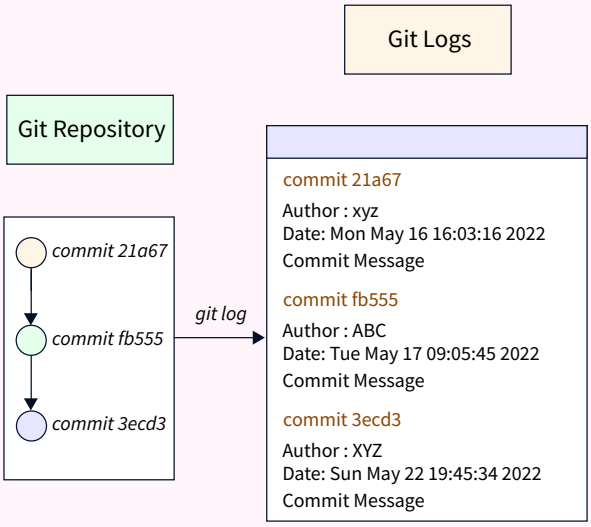

$ git checkout

Switch to another branch and check it out into your working directory.

$ git log

Add a file as it looks now to your next commit (stage).

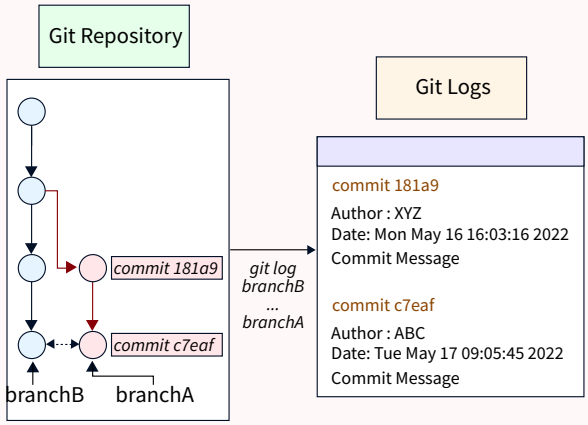

INSPECT & COMPARE

Configuring user information, initializing and cloning repositories.

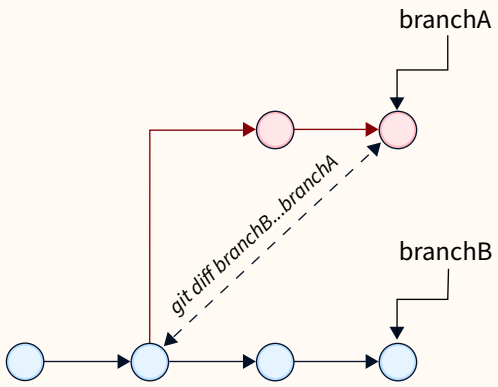

$ git log branchB..branchA

Show the commits on branchA that are not on branchB.

$ git diff branchB...branchA

Show the diff of what is in branchA that is not in branchB.

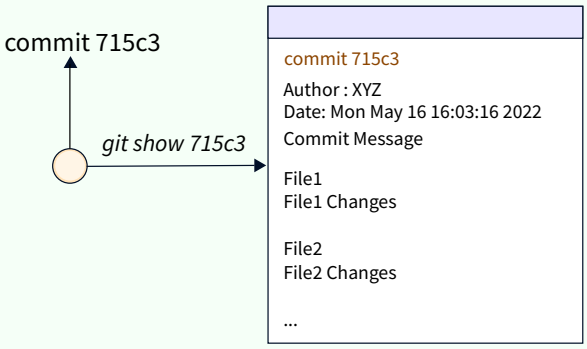

$ git log --follow [file]

Show the commits that changed file, even across renames.

$ git show [SHA]

Show any object in Git in human-readable format.

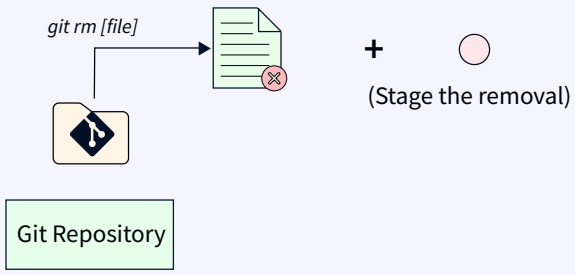

TRACKING PATH CHANGES

Versioning file removes and path changes.

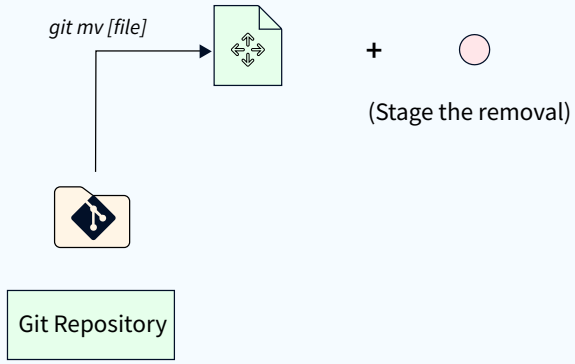

$ git rm [file]

Delete the file from the project and stage the removal for commit.

$ git mv [existing-path] [new-path]

Change an existing file path and stage the move.

$ git log --stat -M

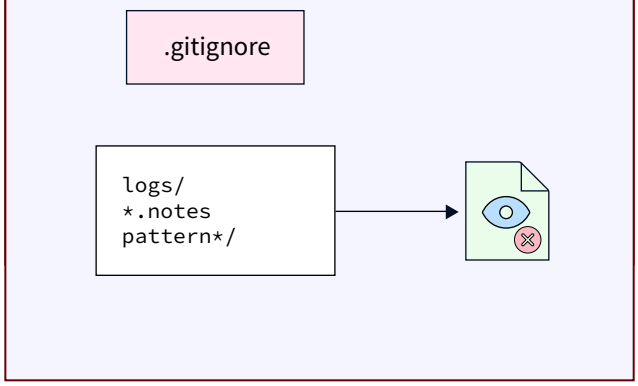

Show all commit logs with indication of any paths that moved.

IGNORING PATTERNS

Preventing unintentional staging or commiting of files.

```
logs/
*.notes
pattern*/
```

Save a file with desired patterns as .gitignore with either direct string matches or wildcard globs.

$ git config --global core.excludesfile [file]

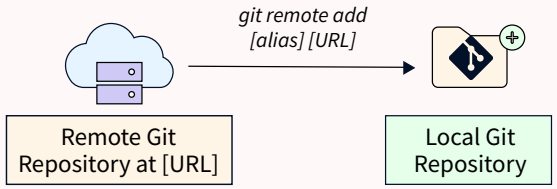

System wide ignore pattern for all local repositories

SHARE & UPDATE

Retrieving updates from another repository and updating local repos.

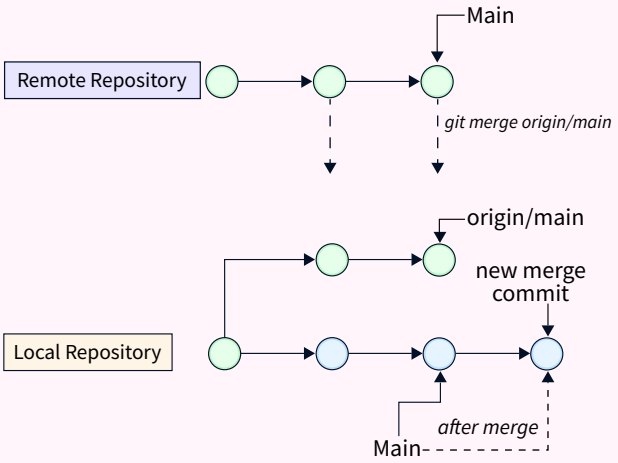

$ git remote add [alias] [url]

Add a git URL as an alias.

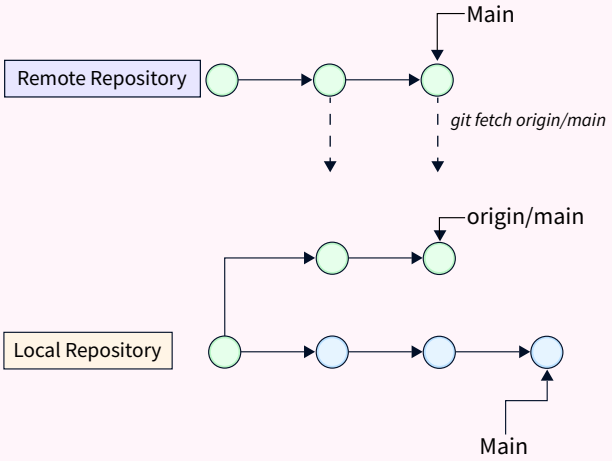

$ git merge [alias]/[branch]

Merge a remote branch into your current branch to bring it up to date.

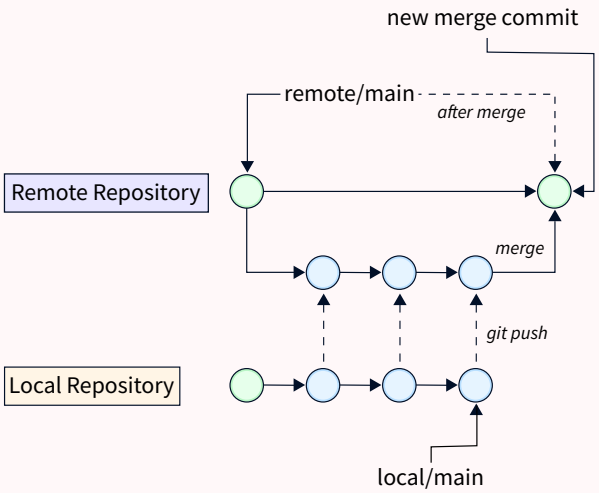

$ git fetch [alias]

Fetch down all the branches from that Git remote.

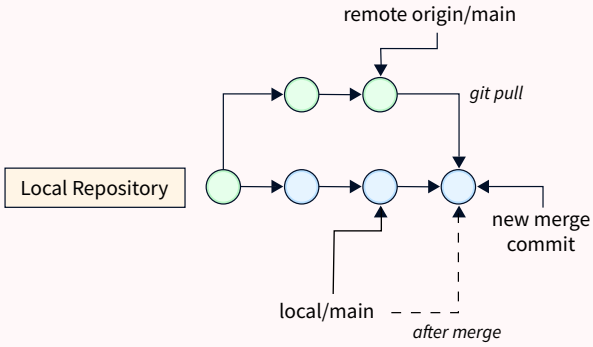

$ git push [alias] [branch]

Transmit local branch commits to the remote repository branch.

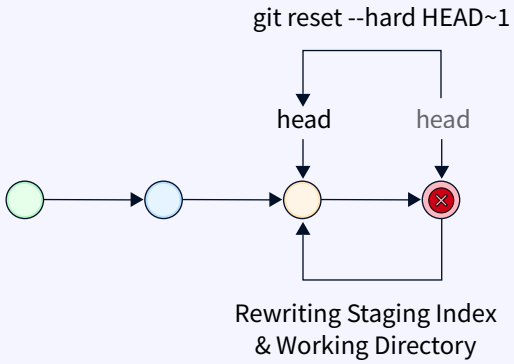

$ git pull

Fetch and merge any commits from the tracking remote branch.

$ git reset --hard [commit]

Clear staging area, rewrite working tree from specified commit.

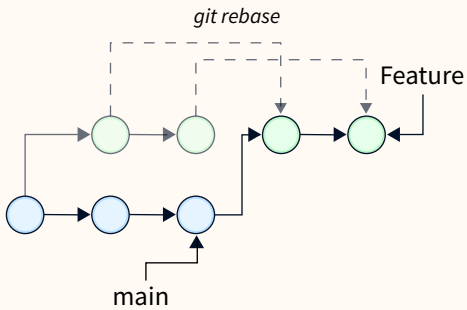

REWRITE HISTORY

Rewriting branches, updating commits and clearing history.

$ git rebase [branch]

Apply any commits of the current branch ahead of specified one.

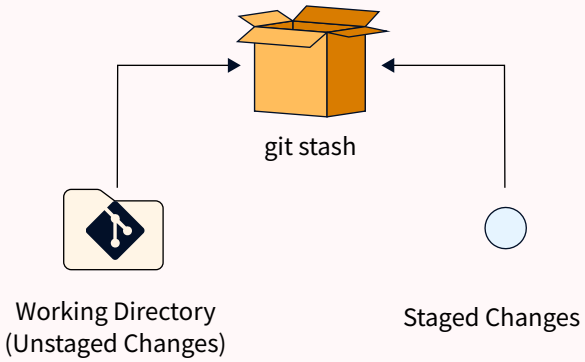

TEMPORARY COMMITS

Temporarily store modified, tracked files in order to change branches.

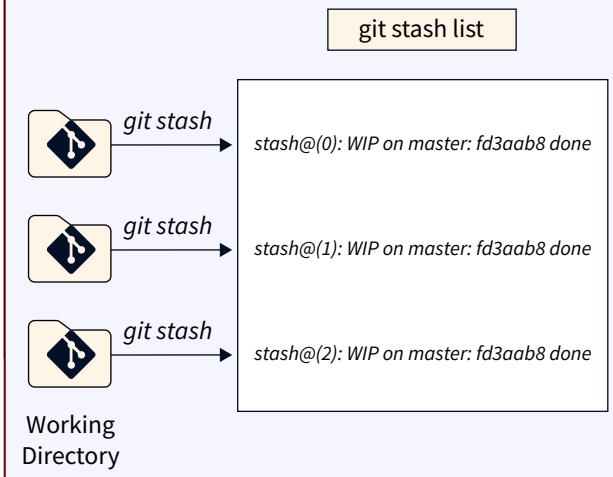

$ git stash

Save modified and staged changes.

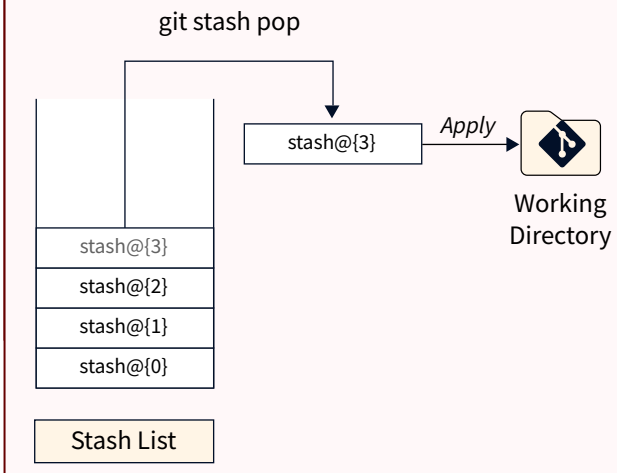

$ git stash list

List stack-order of stashed file changes.

$ git stash pop

Write working from the top of the stash stack.

$ git stash drop

Discard the changes from the top of the stash stack.
